

Amendments to the Claims

1.-8. (Canceled)

9. (Currently amended) A comestible substance integrated with an edible film sheet, said film sheet being produced by a process comprising passing a film-forming fluid comprising a food grade cellulosic material through the nip of a pair of side-by-side heated rollers, said fluid being converted to a film having opposite coherent surfaces respectively engaging opposite rollers of said pair, said film becoming divided between said opposite surfaces into two distinct, self-supporting, continuous film sheets after exiting the nip of said rollers, each sheet having one side comprising one of said opposite coherent surfaces adhering to a surface of one of said rollers, and a second side which is opposite the side adhering to the roller surface, and which has microscopic protuberences extending from the surface thereof, the one side of each sheet facing said roller surface being relatively smooth, said rollers being heated sufficiently to dry the resulting continuous film sheets, said resulting sheet releasing intact from the surface of each roller; and at least said second side of said film sheet is adhered to said comestible substance.

10. (Currently amended) A comestible substance according to claim 212, in the form of a frozen or parbaked dough piece to which said film sheet is laminated.

11. (Original) A comestible substance according to claim 10, wherein said dough piece is a pizza crust.

12. (Currently amended) A comestible substance according to claim 212, comprising heterogeneous components, said film sheet providing a barrier between at least one of said components and the other components.

13. (Original) A comestible substance according to claim 12 wherein said at least one component has a higher water content than said other components.
